## FOREWORD

Prior to August 14, 1929, State supervision over dams was exercised either through the State Engineer or the State Railroad Commission. However, this supervision was limited in scope and extended to less than half of the dams in the State. In addition, several Federal offices exercised supervision to various degrees over debris dams, dams owned by the Government and those occupying government rights of way. There were a large number of dams, however, which had no form of supervision, either Federal or State.

In 1928 the failure of a large dam resulted in a major disaster. Because of the potential hazard created by the many water storage projects in the State, the Legislature of 1929 enacted a law governing the supervision of dams in California, Chapter 766, Statutes of 1929, for the purpose of safeguarding life and property. The statute embraces three main features: (a) examination and approval of dams existing prior to the enactment of the Act, (b) approval of plans and specifications and supervision of construction of new dams, and of the enlargement, alteration, repair or removal of dams, (c) supervision over maintenance and operation of all dams insofar as necessary to safeguard life and property.

Under the Statute, as amended, and in 1943 incorporated in the Water Code, jurisdiction is exercised over the construction, enlargement, repair and maintenance, and operation of the dams within the State of California, that are 25 feet or more high, storing more than 15 acre-feet, or are more than six feet high storing 50 acre-feet or more. Dams owned and operated by agencies of the United States are exempt from State jurisdiction.

The State supervision of dams is administered and exercised by the Department of Water Resources. Rules and Regulations Pertaining to Supervision of Dams in California are available on request to the Department of Water Resources.

A list of the dams over which State supervision is exercised has been compiled as of January 1, 1958, and is made available in this publication. This compilation includes significant data concerning the dams. For the most part, the data herein have been supplied by the owners in the applications and plans submitted in accordance with the Water Code. Information found in subsequent letters, publications and tabulations by the owners has also been used when applicable. In some instances the data have been supplied by field survey. The various sources are sometimes in conflict and although the selected data have not been verified in detail as to accuracy, they are believed substantially correct.

This tabulation is being made available for the use of those to whom it may be of value. Any one who can supply missing data or corrections is asked to send such information to the Department of Water Resources, Box 388, Sacramento 2, California, for use in future revisions of this roster.

The dams are grouped by county of location. Where the dam is located in more than one county, it is listed under the county of alphabetical precedence. An alphabetical listing by name of dam, cross referenced as to county of location, is also included. This arrangement will enable the user to locate the dam in which he is interested, knowing either the name or the location by consulting the appropriate listing.

Information regarding each dam is arranged such that data pertaining to the owner, location, reservoir, and drainage area will be found on the left hand pages, and data pertaining to the dam will be found on the right hand pages.

The tabulated values are determined in accordance with the definitions that follow.

Number — assigned by the Department for identification and filing purposes.

Name — as assigned by the owner of the dam on the original application, or as subsequently changed upon written request of the owner.

Stream — as submitted on the application and revised to later editions of United States Geological Survey topographic maps.

Maximum Operating Level — reservoir water surface elevation at highest controlled stage.

Area of Reservoir — area at spillway crest elevation or at maximum operating level if headwater controls are used.

Maximum Storage Capacity — total capacity at maximum operating level and above streambed. Dead storage is included.

Drainage Area — areas less than 0.1 square mile are listed as 0.1 square mile.

Use — use of the water is abbreviated as follows:

D — Domestic

MI — Mining

I — Irrigation

IN — Industrial

P — Power

R — Recreational

M — Municipal

S — Stock Water

Type and Crest Length — applies to main dam only; does not include auxiliary dams.

Height — vertical distance from crest of dam (excluding parapet, if any) to original streambed at downstream toe.

Approximate Yardage — total volume of principal material of dam, including auxiliary dams.

Approximate Cost — cost of the dam and appurtenant works. Includes cost of enlargements, if any. Does not include power plants, access roads, rights of way, reservoir clearing, etc.

Elevation of Crest — U.S.G.S. datum to nearest foot, when available. Otherwise approximate U.S.G.S. datum.

Purpose — purpose of the dam is abbreviated as follows:

S — Storage

FC — Flood control

D — Diversion

DC — Debris control

R — Regulation

A — Multi-purpose

Year Completed — date the original construction was completed.

NS — Not started

UC — Under construction

X — Prior to 1929, exact date unknown

A list of dams in California owned or operated by agencies of the United States is given on pages 33 through 35. Appreciation is expressed to these agencies for their

helpful cooperation in supplying the data concerning these dams which are exempt from State jurisdiction under Division 3 of the Water Code.

There were, as of January 1, 1958, 838 dams within the jurisdiction of the State, many of which are structures of considerable magnitude. The aggregate storage capacity of these dams is approximately 9,146,000 acre-feet and the total cost about \$348,089,000.

It is anticipated that supplements and corrections to this roster will be issued periodically.

Following is a list of abbreviations used:
